AI Chat Bot — Project Documentation

What is this project?

This is a simple rule-based AI Chat Bot implemented in C++. It simulates conversational behavior by matching cleaned user tokens (keywords) against predefined topics and returning a selected textual version from a JSON-like content file. It is not machine-learning based — instead it uses deterministic token processing, scoring, ranking and a small randomizer to vary responses.

Short flow summary

- Program starts at main()
- Menu management loads a JSON content file (line-by-line into a vector)
- User types a prompt
- The prompt is tokenized and cleaned
- Each JSON "Topic" heading is searched for token matches
- Matches get scored and topics are ranked
- The best matching topic's details are extracted (one of several "version_X" variants is chosen randomly)
- The chosen lines are printed as the bot's response

Why this project was created?

- To learn and demonstrate the building blocks of text-based chat interactions:
 - o File I/O, tokenization, string cleaning, keyword matching, simple scoring, and menu control
- The project is intentionally simple enough to inspect every step and see how a rule-based chatbot can be constructed from basic functions.

Main goal

- To provide an educational, fun implementation that simulates an AI-like chat experience using only deterministic rules and content stored in a file.

Features

- Import content from a JSON-like file (Content.json)

- ❑ Tokenize and clean user input
- ❑ Remove common/stop words
- ❑ Find possible topics in file matching user tokens
- ❑ Score and rank topics by match percentage
- ❑ Extract content lines for the chosen topic
- ❑ Choose a random version (version_1..version_5) of the topic to reduce repetition
- ❑ Display the response to the user via a simple menu

Folder structure (as used in code)

- ❑ src/ (sources)

- o main.cpp

- o menus.cpp

- o menus_Managment.cpp

- o File_to_String.cpp

- o String_To_Tokens_Functions.cpp

- o Responce_Managment.cpp

- ❑ include/ (headers)

- o meuns_Managment.h

- o menus.h

- o File_to_String.h

- o String_To_Tokens_Functions.h

- o Responce_Managment.h

- ❑ data/Content.json

Modules

1. main.cpp:

- ❑ Entry point of the program.
- ❑ Calls Menu_Managment() which runs the chat loop.

ort

#include

```
#include
```

```
#include
```

```
#include "../include/meuns_Managment.h"
```

```
using namespace std;
```

```
int main()
```

```
{
```

```
    Menu_Managment();
```

```
}
```

1. menus_Managment.cpp:

- ☐ Acts as the coordinator for the application.
- ☐ Loads the data file into the global vector File using File_To_String(json_file_path).
- ☐ Runs the interactive loop:
 - o On first pass shows a welcome screen (New_Chat_Menu())
 - o Reads user prompt (Prompt_Input())
 - o Gets bot response (Responce_Managment_System(prompt))
 - o Displays output (Output_Display_Menu(responce))
- ☐ Declares two globals used by other modules:
 - o vector File (holds lines read from Content.json)
 - o string json_file_path (default: "data/Content.json")

```
#include
```

```
#include
```

```
#include
```

```
#include "../include/meuns_Managment.h"

#include "../include/menus.h"

#include "../include/String_To_Tokens_Functions.h"

#include "../include/Responce_Managment.h"

#include "../include/File_to_String.h"

using namespace std;

vector File;

string json_file_path = "data/Content.json";

void Menu_Managment(){
    File = File_To_String(json_file_path);

    bool New_Chat_Condition = true;

    vector responce;

    while(true)
    {
        if (New_Chat_Condition)
        {
            New_Chat_Menu();

            New_Chat_Condition = false;
        }
        else
        {
            string prompt = Prompt_Input();

            responce = Responce_Managment_System(prompt);

            Output_Display_Menu(responce);
        }
    }
}
```

```
}
```

```
}
```

2. menus.cpp:

□ Contains user interaction / display helpers:

o Main_Menu(): prints the welcome header

o Output_Display_Menu(vector): prints bot's multi-line response

o Prompt_Input(): reads a full line from stdin (getline) and returns it

o New_Chat_Menu(): clears the console (system("cls")) and shows Main_Menu()

Note: system("cls") works on Windows. On Unix-like systems use "clear" or avoid console clearing.

```
#include
```

```
#include
```

```
#include
```

```
#include "../include/menus.h"
```

```
using namespace std;
```

```
void Main_Menu()
```

```
{
```

```
    cout <<
```

```
"===== "<
```

```
<endl;
```

```
    cout << "===== Hi, I am Ai Chat Bot
```

```
===== "<endl;
```

```

        cout <<
"===== "<
<endl;
        cout << "----- Ai Chat Bot ----- "<<endl;
        cout <<endl;
        cout << " How can I help you today?";
        cout<<endl;
        cout << endl;
    }
    void Output_Display_Menu( vector output)
    {
        cout << "----- Ai Chat Bot ----- " <<endl;
        cout<<endl;
        for (int i = 0; i < output.size(); i++){
            cout << output[i] << endl;
        }
        cout<<endl;

    }
    string Prompt_Input(){
        string prompt;
        cout << "----- User ----- " << endl;
        cout << endl;
        cout << "User: ";
        getline(cin, prompt);
        return prompt;
    }
    void New_Chat_Menu()

```

```
{
    system("cls");
    Main_Menu();
}
```

3. File_to_String.cpp:

- Reads the JSON file line-by-line into vector and returns it.
- File_To_String(string json_file_path):
 - o Opens an ifstream
 - o If it can't open, prints an error and returns an empty vector
 - o Pushes each line into vector lines
 - o Calls File_Display(lines) which prints all lines to stdout (for debugging)
 - o Returns lines

Design note: This module treats Content.json as plain text (not parsed JSON). It relies on line structure to find "Topic" and "version_X" tokens.

```
#include
```

```
#include
```

```
#include
```

```
#include
```

```
#include
```

```
#include "../include/File_to_String.h"
```

```
#include "../include/String_To_Tokens_Functions.h"
```

```
using namespace std;
```

```
void File_Display(vector File)
```

```

{
    for (int i = 0; i < File.size(); i++)
    {
        cout<<File[i]<<endl;
    }
}

vector File_To_String(string json_file_path){
    vector lines;
    string line;
    ifstream file(json_file_path);
    if (!file.is_open()) {
        cout << "Error opening file: " << json_file_path << endl;
        return {};
    }
    while (getline(file, line)) {
        lines.push_back(line);
    }
    file.close();
    File_Display(lines);
    return lines;
}

```

4. String_To_Tokens_Functions.cpp:

□ Core text-processing utilities. Responsibilities:

o Removing punctuation, quotes, commas, colons, braces, parentheses, slashes, etc.

- o Trimming leading/trailing whitespace
- o Lowercasing text
- o Splitting a string into word tokens
- o Removing common / stop words (examples: is, the, a, an, of, in, to, and, are, you, can, help, I, my, me)
- o Cleaning JSON value strings (Clean_Json_Details) to extract the actual content between quotes

Key functions:

- Processed_String_To-Token(string str)
 - o Lowercases, tokenizes, cleans individual tokens and removes common words
 - o Returns vector tokens suitable for matching
- String_To-Token, Count_Number_of_Words, Clean_Array_of_Strings etc.
- Clean_Json_Details(string str)
 - o Designed for the specific Content.json formatting:
 - o It takes line like: { "version_1": "Some text" }, and strips out the initial part and trailing characters to leave just the description.

#include

    return str;
}

```

5. Responce_Managment.cpp

- The "reasoning" module that chooses what response to return based on a prompt.
 - Main entry: Responce_Managment_System(string prompt)
 - o Converts prompt into tokens using Processed_String_To_Token()
 - o Calls Possible_Topic_In_Json(tokens) to find candidate topic lines and scores
 - o If no topics, returns a default apology response
 - o Otherwise arranges candidate topics in descending order
(Arange_Possible_Topics_Decending)
 - o Extracts the matching topic's details (Extract_Topic_Details_From_Json) and returns them
- Important helper functions:
- Possible_Topic_In_Json(vector tokens)
 - o Iterates through every line in File
 - o For each line, if the line contains "Topic" and contains any token, it increments points
 - o Computes Points_Calculation = (points / #tokens) * 100 and if points > 0, pushes {line_number, percent}
 - o Returns vector where each inner vector is {line_number, percent}

- `Arrange_Possible_Topics_Descending(...)`

- o Simple bubble-style comparison that sorts the `Possible_Topics` array by the percent score in descending order

- `Extract_Topic_Details_From_Json(...)`

- o Picks the top matching topic (`Possible_Topics[0]`)

- o Adds 1 to the topic line index to start reading its "Detail" lines

- o Uses a randomizer (`rand()%5`) to choose which version set (`version_1..version_5`) to collect

- o Collects lines that match that chosen version and uses `Clean_Json_Details` to extract the text

- o Stops collecting once it hits the next "Topic" or the version lines end

Notes on the matching logic

- Matching is line-driven and depends on `literal string.find` for tokens and "Topic"

- The code currently checks: `if line.find(token) != npos && line.find("Topic") != npos` then `points++`

- o That means only lines that themselves contain "Topic" (topic headers) are considered for matching tokens

- o This effectively tries to match tokens against the topic title line only — not topic detail lines

- The `Points_Calculation` divides matched tokens by total tokens. A topic with more matched keywords gets a higher match percentage

6. Content.json:

□ Holds an array of objects. Each object contains:

o "Topic": ""

o "Detail": [{ "version_1": "..."} , { "version_2": "..."} , ...]

□ Each topic is written across many lines; code expects a consistent form so

Clean_Json_Details works

□ Because file is parsed as lines rather than using a JSON parser, formatting (spaces, commas, quotes and line breaks) is significant

Note: The details of each topic are written by AI. Using Gemini which was then converted to Json.

"Topic": "windows vs linux",

"Detail": [

{ "version_1": "The Popular Choice: Windows vs Linux" },

{ "version_1": "Buddy, when it comes to operating systems, Windows and Linux are two of the most talked about options, each with its own strengths and weaknesses." },

{ "version_1": "Windows is widely known for its user friendly interface, extensive software compatibility, and strong support for games and commercial applications." },

{ "version_1": "Linux, on the other hand, is open source, highly customizable, and often preferred by developers and system administrators for its security and flexibility." },

{ "version_1": "Choosing between them depends on what you need: Windows is convenient and familiar, while Linux offers control and stability for those willing to explore its possibilities." },

{ "version_2": "Performance and Resource Management" },

{ "version_2": "Buddy, one major difference between Windows and Linux is how they handle performance and system resources." },

{ "version_2": "Windows can be demanding on hardware, often requiring more RAM and processing power to run smoothly, especially with updates and background services." },

{ "version_2": "Linux is generally lighter and can run efficiently even on older or limited hardware, making it ideal for servers or low cost systems." },

{ "version_2": "For users who prioritize speed, stability, and resource management, Linux often outperforms Windows, though Windows provides better compatibility for high end gaming and certain commercial software." },

{ "version_3": "Security and Stability" },

{ "version_3": "Buddy, security is another key factor that separates Windows from Linux." },

{ "version_3": "Windows is a common target for viruses and malware due to its widespread use, and it requires constant updates and antivirus software to stay protected." },

{ "version_3": "Linux, with its open source nature and strict permission system, is considered more secure and stable." },

{ "version_3": "Most malware is designed for Windows, and Linux users benefit from a robust community that quickly addresses vulnerabilities." },

{ "version_3": "This makes Linux the go to choice for servers and tech professionals

who need a reliable and secure environment." },

{ "version_4": "User Experience and Customization" },

{ "version_4": "Buddy, Windows and Linux also differ in terms of user experience." },

{ "version_4": "Windows is known for its intuitive, polished interface and wide availability of applications that don't require technical expertise." },

{ "version_4": "Linux, however, offers unmatched customization — you can change desktops, window managers, and even core system behaviors." },

{ "version_4": "While Linux may have a steeper learning curve, it gives users control that Windows doesn't." },

{ "version_4": "For tech enthusiasts and developers, this freedom is invaluable, but for casual users who just want a computer that works out of the box, Windows often feels more convenient." },

{ "version_5": "Community and Support" },

{ "version_5": "Buddy, another important distinction is the type of support and community behind each system." },

{ "version_5": "Windows has official customer service and widespread professional support, making it easy to find help for problems." },

{ "version_5": "Linux relies heavily on community forums, online documentation, and user driven support." },

{ "version_5": "This can be empowering for those who enjoy learning and experimenting, but it can be challenging for beginners who prefer structured assistance." },

{ "version_5": "Ultimately, your choice may depend on whether you value official support and convenience (Windows) or flexibility and community driven problem solving (Linux)." }

    { "version_1": "The World of Programming" },
    { "version_1": "Buddy, programming is like giving instructions to a computer to make it
do exactly what you want." },
    { "version_1": "At its core, it's about solving problems and creating solutions through
code." },
    { "version_1": "Programming allows us to build everything from simple calculators to
complex video games and artificial intelligence systems." },
    { "version_1": "It combines logic, creativity, and precision, making it both a science and
an art." },
    { "version_1": "Learning programming gives you the ability to control machines,
automate tasks, and bring ideas to life in ways that were impossible just a few decades
ago." },

    { "version_2": "Why Programming Matters" },
    { "version_2": "Buddy, programming isn't just for computer scientists — it's a skill that
affects almost every part of modern life." },
    { "version_2": "From smartphones and social media to banking systems and
transportation, software drives our world." },
    { "version_2": "Understanding programming helps you see how these systems work and
even lets you create your own solutions." },
    { "version_2": "Beyond practical applications, programming develops critical thinking,
logical reasoning, and problem solving skills." },
    { "version_2": "It teaches you how to break down big problems into smaller steps, a skill
that is useful far beyond computers." },
```

{ "version_3": "Languages and Tools of Programming" },

{ "version_3": "Buddy, one of the fascinating parts of programming is the variety of languages you can learn." },

{ "version_3": "Each language — like Python, C++, or Java — has its strengths and specific uses." },

{ "version_3": "Python is great for beginners and data science, C++ is used in game development and high performance systems, and Java is popular for mobile and enterprise applications." },

{ "version_3": "Alongside languages, programmers use tools like compilers, interpreters, and integrated development environments (IDEs) to write, test, and debug code." },

{ "version_3": "These tools make the process smoother and allow programmers to focus on creativity and problem solving." },

{ "version_4": "The Logic Behind Programming" },

{ "version_4": "Buddy, programming is all about logic." },

{ "version_4": "Every line of code must make sense, and computers follow instructions exactly as written." },

{ "version_4": "This teaches precision, attention to detail, and systematic thinking." },

{ "version_4": "Beginners often start with simple programs to understand concepts like loops, conditions, and functions." },

{ "version_4": "As you progress, programming introduces more complex ideas like data structures, algorithms, and object oriented design." },

{ "version_4": "It's like learning a new language that a machine understands, but mastering it opens the door to creating almost anything in the digital world." },

{ "version_5": "The Future and Opportunities in Programming" },

{ "version_5": "Buddy, learning programming opens countless doors for the future." },

{ "version_5": "From developing apps, websites, and games to working in cutting edge

fields like artificial intelligence, robotics, and cybersecurity, programmers have endless opportunities." },

{ "version_5": "Programming also empowers creativity — you can turn an idea into a working solution, no matter how small or ambitious." },

{ "version_5": "As technology continues to evolve, programming remains a critical skill that shapes the modern world." },

{ "version_5": "For anyone willing to learn, it's not just a career path, but a way to participate actively in the digital revolution." }

{

"Topic": "c++",

"Detail": [

{ "version_1": "Introduction to C++" },

{ "version_1": "Buddy, C++ is one of the most powerful and widely used programming languages in the world." },

{ "version_1": "It is an extension of the C language but comes with object oriented features, which means it allows programmers to organize code into classes and objects." },

{ "version_1": "C++ is used to develop software ranging from games and operating systems to high performance applications." },

{ "version_1": "Learning C++ gives you a solid foundation in programming concepts like variables, data types, functions, and loops, while also introducing you to advanced concepts like classes, inheritance, and polymorphism." },

{ "version_2": "Why C++ is Important" },

{ "version_2": "Buddy, C++ matters because it combines efficiency with flexibility." },

{ "version_2": "Unlike some languages that rely heavily on built in libraries, C++ gives

you direct access to system resources like memory and CPU, making it ideal for performance critical applications." },

{ "version_2": "It also supports both procedural and object oriented programming, giving beginners a step by step path to advanced programming." },

{ "version_2": "By learning C++, you not only gain a tool for creating software but also an understanding of how computers manage resources and execute instructions at a low level." },

{ "version_3": "Basic Components of C++" },

{ "version_3": "Buddy, every C++ program starts with a few core elements: variables, operators, functions, and control structures." },

{ "version_3": "Variables store data, operators perform calculations, and functions help break code into reusable blocks." },

{ "version_3": "Control structures like loops and conditional statements let you dictate how the program runs based on conditions." },

{ "version_3": "Understanding these components is crucial because they form the building blocks of any program, no matter how simple or complex, and give you the tools to solve problems efficiently." },

{ "version_4": "Object Oriented Programming in C++" },

{ "version_4": "Buddy, one of the reasons C++ stands out is its support for object oriented programming (OOP)." },

{ "version_4": "OOP allows you to create classes that define objects with properties (attributes) and behaviors (methods)." },

{ "version_4": "Concepts like inheritance, polymorphism, and encapsulation make code easier to manage, reuse, and scale." },

{ "version_4": "This approach mirrors real world objects and relationships, making C++ particularly suitable for developing large applications, games, and simulations where

organization and modularity are key." },

{ "version_5": "The Learning Path and Future of C++" },

{ "version_5": "Buddy, starting with C++ opens the door to both programming and computer science careers." },

{ "version_5": "Beginners usually begin with simple programs to learn syntax, data types, and loops, then move to functions, arrays, and pointers." },

{ "version_5": "Once comfortable, they can explore classes, objects, and advanced features like templates and the Standard Template Library (STL)." },

{ "version_5": "Learning C++ not only helps you build software but also strengthens problem solving and logical thinking skills." },

{ "version_5": "Even in modern development, C++ remains relevant for performance critical applications, making it a language worth mastering." }

{

"Topic": "html & css",

"Detail": [

{ "version_1": "Introduction to HTML & CSS" },

{ "version_1": "Buddy, HTML and CSS are the backbone of web development." },

{ "version_1": "HTML, or HyperText Markup Language, is used to create the structure of web pages — it defines headings, paragraphs, links, images, and other content." },

{ "version_1": "CSS, or Cascading Style Sheets, is what makes those pages look good, controlling colors, fonts, layouts, and responsiveness." },

{ "version_1": "Together, they allow developers to build websites that are not only functional but also visually appealing." },

{ "version_1": "Without HTML and CSS, the web would be a plain and unstructured

place, lacking the design and interaction we take for granted today." },

{ "version_2": "The Role of HTML" },

{ "version_2": "Buddy, HTML is like the skeleton of a website." },

{ "version_2": "It provides the framework that organizes content and tells browsers how to display it." },

{ "version_2": "With HTML, you can create headings, paragraphs, lists, images, tables, and forms, giving structure to the page." },

{ "version_2": "HTML elements are marked with tags, which are easy to learn and use, making it beginner friendly." },

{ "version_2": "By mastering HTML, you gain the ability to design web pages that can be interpreted correctly by browsers, forming the foundation for all web development." },

{ "version_3": "The Role of CSS" },

{ "version_3": "Buddy, CSS is what gives life to the skeleton created by HTML." },

{ "version_3": "It controls the style and layout of web pages, from simple text colors to complex grid designs and animations." },

{ "version_3": "With CSS, developers can ensure their websites look consistent across different devices and screen sizes, making them responsive and user friendly." },

{ "version_3": "It allows you to separate content from design, meaning you can change the appearance of a website without altering its structure." },

{ "version_3": "CSS turns plain HTML into visually engaging and professional looking websites." },

{ "version_4": "HTML and CSS Working Together" },

{ "version_4": "Buddy, the real magic happens when HTML and CSS work together." },

{ "version_4": "HTML provides the content and structure, while CSS styles it, controlling everything from font sizes to page layout." },

```
{ "version_4": "For example, HTML can create a heading and paragraph, and CSS can change the heading's color, font, and position." },
```

```
{ "version_4": "By combining them, developers can create websites that are both functional and visually appealing." },
```

```
{ "version_4": "Learning how to use HTML and CSS together is the first step toward becoming a web developer and building websites that attract and engage users." },
```

```
{ "version_5": "The Importance of HTML & CSS Today" },
```

```
{ "version_5": "Buddy, HTML and CSS are more relevant than ever because the web is central to modern life." },
```

```
{ "version_5": "Every website, from blogs to e-commerce platforms, relies on them." },
```

```
{ "version_5": "Knowing HTML and CSS gives you the power to create and customize web pages, making you independent from pre-built templates or content management systems." },
```

```
{ "version_5": "They also serve as a foundation for learning more advanced web technologies like JavaScript, frameworks, and server-side development." },
```

```
{ "version_5": "Understanding HTML and CSS equips you with the skills to bring ideas to life on the internet and play an active role in the digital world." }

]

}

]

Example:

□ User: "Tell me about Pakistan movement"

□ Prompt_Input returns the full string

□ Processed_String_To_Token:

□ Lowercases: "tell me about pakistan movement"

□ Tokenizes to ["tell", "me", "about", "pakistan", "movement"]

□ Cleans tokens, removes stop words (me, about) → tokens may become ["tell", "pakistan", "movement"]

□ Possible_Topic_In_Json checks each line containing "Topic" if it contains any of these tokens

- The "Topic" line " "Topic": "pakistan movement"," will match both "pakistan" and "movement" and get a high percent
- Topic ranking chooses the best matching topic (pakistan movement)
- Extract_Topic_Details_From_Json chooses one "version_X" set at random and returns those lines (Clean_Json_Details used to strip the JSON noise)
- Output_Display_Menu prints the selected lines
